

Information Security Policy

..... modern and professional salvage agents and parts recyclers

Established for over 30 years, ASM Auto Recycling is widely regarded as one of the UK's most modern and professional vehicle salvage agents and parts recyclers.

At present we process over 30,000 end-of-life vehicles every year and specialise in online salvage auctions, with over 2,500 damage-repairable and stolen-recovered cars, vans and motorbikes available for purchase every single week.

We also have a very extensive used car parts department. With over 2,000 vehicles stored at our premises in readiness for the dismantling of green/recycled parts, we can supply used car parts for most makes and models of vehicle.

The company operates an Integrated Management System to meet the requirements of ISO27001, the international standard for Information Security Management.

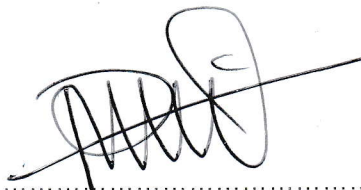

Core principles of the information security and the management system include:

- Information provided to ASM Auto Recycling to achieve the effective processing of cars and the sale of car parts will always remain safe and secure
- The company fully complies with the requirements of the General Data Protection Regulations (GDPR) for the protection of personal information
- Operating an effective and methodical risk management process for information security, thereby reducing risks to an acceptable level
- Ensure that supporting information policies and procedures are regularly reviewed and that continual improvement is maintained to safeguard effective working practices and procedures
- Ensure that information security requirements are regularly communicated to all relevant parties
- Training and development of staff

Information security objectives are defined and monitored within the company and are regularly reviewed to identify opportunities and areas for continual improvement.

Certification to the internationally recognised standard for Information Security Management (ISO27001:2013) is central to the way that the company does business.

We will work to continually improve company performance and its associated management systems in order to maintain and strengthen information security. The systems defined have my active full support. They are under continual review and improvement, and once defined, are mandatory for all personnel.
